(1) Option 'C' :- 'A' makes a profit of 11 %

Suppose the initial cost of article is Rs 1000.
A sells this article to B at 10% profit (Rs 1100)
After that B sells back to A at 10% loss (Rs 990)
So, A got the article of ~~cost~~ price Rs 1000 back at price Rs 990.
Means A got 110 Rs profit which is 11% of Rs 1000.

(2) Option 'D' :- 11/20 is the Larger fraction

(3) The sum of three consecutive number is 72.
The numbers are 23, 24, 25.
So, the smallest number is 23 which is option 'C'.

(4) The sum of two prime number is always not a odd number ~~like~~ as 5+3=8, not an even number ~~like~~ as 2+3=5, not a prime number as 11+7=18
Option 'D' None of these is the answer

(5) Half of percent in decimal is 0.005
Option 'C'

(6) 5 machines are producing 5 parts in 5 minutes. So, each machine is producing one part in 5 minutes.
The time required to produce 100 parts ~~in~~ with 100 machines will be '5 minutes'

(7) 9 occurs 20 times in counting from 1 to 100.

09, 19, 29, 39, 49, 59, 69, 79, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99 → two times occurence

(8) Pair of shoes hold by each case $= \frac{28}{2} = 14$

cases required to hold 70 pairs $= \frac{70}{14} = 5$

Ans = 5

(9) The numbers place in question marks will be 28, 32

CamScanner

(10) Let father's age = x

Let son's age = y

$x = 3y$ —(i) (Father's age is 3 times then son's age)

$x + 15 = 2(y + 15)$ —(ii) (After 15 years father's age is two times than son's age)

$x + 15 = 2y + 30$

Put $x = 3y$

$3y + 15 = 2y + 30$

$y = 15$ years

So, son's age will be 15 years.
